

CalWIN Honored with 2013 Digital Government Best of the Web Award

Digital Government annual Best of the Web (BOW) awards recognize city, county and state governments for outstanding portals and websites based on innovation, functionality, productivity and performance.

The Welfare Client Data Systems (WCDS) Consortium is honored to receive the Best of the Web award in the Government-to-citizen category for the CalWIN Expanded Access Project.

The CalWIN Expanded Access project expanded client access to new CalWIN Benefits mobile application and MyBenefits CalWIN portal features. Using the MyBenefits CalWIN portal and mobile app, clients are able to access their benefits whenever and wherever they want. Clients can apply for aid, check their benefit status, submit reports and renewal forms and learn more about services. In the event of a declared disaster, clients can apply for Disaster food assistance.

“As technology continues to evolve, governments are finding innovative ways of utilizing new technologies to transform operations and engage with citizens,” said Todd Sander, executive director of the Center for Digital Government. “This year’s winners have demonstrated the ability to adapt to the changing technology landscape, while creating first-class public and business services. Congratulations to this year’s winners for their remarkable achievements!”
